

Form Graphic Designer - Specifications.

Form Graphics Designer is a WYSIWIG form graphics package used to design how E-form pages appear on screen. Although used for E-Forms, this software package is also widely used as a standalone design tool to create professional quality paper forms.

Using this powerful design tool, pixel perfect copies of existing paper forms can rapidly be created.

- TrueType fonts, variable line spacing, word-wrap, centering, justification, UK English spell check, indenting of text.
- Form text and graphics can be imported from existing windows documents.
- Appearance of text the end user enters in each field can be configured.
- Object based designing: When an individual form object such a block of text or a dotted line is placed on the page, it can be reselected at any time and then altered, deleted or copied, while leaving surrounding form objects unchanged.

- Groups of form objects can be selected at once, and moved, copied, deleted, and have their characteristics altered.
- To produce individualized documents, text areas adjust their position to accommodate added words, sentences, and paragraphs.
- Customised boxes, borders, corners, lines, imported images and logos.
- Vector Graphics: At any resolution form elements always appear in high quality, never "blocky". The end user can expand or reduce the size of the page on screen to suit their computer.

- Extensive tools for ensuring that all form objects are correctly placed and sized.
- The designer can work on more than one form page simultaneously. By copying and modifying sections from one page to another, one section can act as a foundation for rapidly building the rest of the form.
- Extensive help files, tutorials and sample forms included in package.
- Form pages can be outputted in Adobe PDF format.
- Tools available to import and convert existing forms from Adobe PDF and Word format.
